## Checking the version number

Some mistakes have crept into ENYGUIDE Version 3.6.5, which you may have saved on your hard drive. We kindly ask that you check to ensure you are working with the current version.

### Step 1:

Start the ENYGUIDE Configurator via the file “Enyguide.exe” (application), which you will find on your computer (usually on the hard drive under C:\Enyguide or as a link on your desktop).

- If ENYGUIDE starts a two-part update, please do not cancel either of these processes!  
After the successful update, which can take up to 25 minutes, your version will be current.  
You don't have to do anything else and can go back to planning distribution systems in ENYGUIDE as usual.
- If an update doesn't start, proceed to step 2.

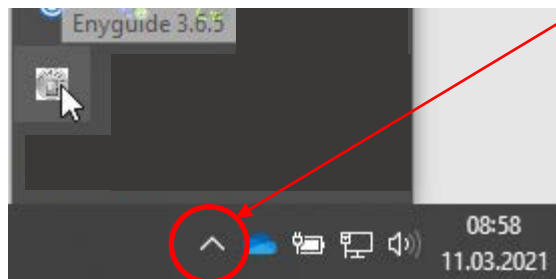

## Checking the version number

### Step 2:

When ENYGUIDE is open, you will see the round ENYGUIDE symbol on the right of the taskbar by the clock. Hold your mouse over it to see the version number of ENYGUIDE.

Or click on the arrow shown below to show hidden icons.

### Step 3:

→ If you see the number 3.6.5.3, your version is fully up to date.

You don't have to do anything else and can go back to planning distribution systems in ENYGUIDE as usual.

→ If you see the number 3.6.5, your version is faulty. Please proceed to step 4.
